Earl.

In advance of our meeting on Friday, I wanted to share the technical basis for the volume estimate that we have presented to EPA. The attached table and figure summarize our assumptions on the depth of contamination at the existing sampling locations.

As we discussed on the phone today, we would like to discuss EPA's basis for the estimate of approximately 49,000 CY of contaminated soil at the site. We would also like to discuss the overall cost estimate EPA has for the site – including any updates that have been made since

the EECA.

We will then take this technical information back to Potlatch to help them understand the basis of EPA's position on the project cost and volume assumptions for the purposes of the ongoing cost sharing negotiations.

We appreciate your willingness to meet this week and I look forward to seeing you in our Spokane office at 10:00 on Friday.

In the meantime, we can work with Steve to see if we can connect him with the video conference.

See you Friday.
